PROJECT REPORT

MODULE-1

For this task, I used an online design tool to create my infographic on digital literacy. The tool helped me organize

information visually using icons, colors, and structured sections. It was easy to use and allowed me to present the

content in a clean and attractive format.

My design focuses on key aspects of digital literacy,

including its definition, useful digital tools for students, safe internet practices, professional online presence,

and email etiquette. Each section highlights important points in a concise manner so that the viewer can quickly understand

the concepts. I used simple headings and bullet points to make the infographic clear and easy to read.

One thing I found interesting while making this infographic was how visual representation makes information more

engaging compared to plain text. However, I also found it slightly challenging to fit all the important points into

limited space without making the design look crowded. Overall, this task helped me improve both my understanding of digital

literacy and my ability to present information creatively.

MODULE-2

For this task, I chose platforms such as LinkedIn, GitHub, and Google Drive as essential tools for my academic and

professional growth. Each of these platforms serves a different but important purpose.

LinkedIn is mainly used for building a professional network, showcasing achievements, and applying for internships or

job opportunities. GitHub is useful for storing, managing, and sharing coding projects, which is especially important for

demonstrating technical skills. Google Drive helps in storing academic files, notes, and projects securely, while also

allowing easy access and collaboration.

Over the next four years, I plan to actively use LinkedIn to build a strong professional profile and connect with

industry professionals. I will regularly upload and update my projects on GitHub to create a solid portfolio. Additionally,

I will use Google Drive to organize my study materials and collaborate on group assignments. These platforms will help me

stay organized, improve my skills, and prepare effectively for future career opportunities

MODULE-3

For this task, I used HackerRank for coding practice and Google Forms along with Google Sheets for collaboration. On

HackerRank, I created an account and completed a beginner-level problem, which helped me understand basic problem-solving

and coding logic. It also gave me exposure to how coding platforms evaluate solutions.

For the collaboration part, I created a “Digital Literacy Awareness Quiz” using Google Forms with both multiple-choice

and short-answer questions. The responses were automatically collected and organized in Google Sheets, making it easy to

analyze the data.

These tools will help me academically in multiple ways. HackerRank will improve my coding skills and prepare me for

technical interviews and placements. Google Forms and Sheets will help me in conducting surveys, collecting data for

projects, and collaborating efficiently with classmates. Overall, these platforms enhance both my technical and

organizational skills, which are essential for academic success and future career growth.

MODULE-4

Poor digital communication can often lead to misunderstandings and missed opportunities. For example, a student once

sent an email to a professor requesting an extension but used an informal tone, did not include a proper subject line,

and failed to clearly explain the reason. As a result, the professor misunderstood the request and did not respond on time,

which led to a late submission penalty.

This situation could have been handled better by following proper email etiquette. The student should have used a clear

subject line, a respectful greeting, and a well-structured message explaining the situation briefly and politely. Including

all necessary details and maintaining a professional tone would have increased the chances of a positive response.

This highlights how effective and professional communication plays a crucial role in academic and professional

environments.

MODULE-5

While researching cybercrime, I was most surprised by how easily people fall victim to online scams, especially UPI and

phishing frauds. Many attacks do not require advanced hacking skills; instead, they rely on tricking users into sharing

sensitive information like OTPs or approving fake payment requests. It was also interesting to learn how quickly such

frauds can happen and how difficult it can be to recover lost money if action is not taken immediately.

As a result of this research, one habit I will personally change is being more cautious while making online transactions.

I will always verify UPI IDs and avoid clicking on unknown links or messages. I will also make sure to never share

confidential details like OTPs or passwords with anyone. This awareness will help me stay safer online and guide others

as well
